EXPERIENCE

Co-Founder & Lead Software Architect — SaaS HRMS Platform

Stealth SaaS Venture | Noida, India | Jan 2026 – Present

- Architected and delivered an enterprise-grade HRMS SaaS platform 10× the scale of prior systems, onboarding an enterprise client managing ~300 employees within the first deployment cycle.
- Designed multi-tenant microservices architecture with RESTful APIs, Role-Based Access Control (RBAC), and end-to-end encrypted data pipelines to ensure enterprise-level data isolation and compliance.
- Engineered automated payroll, leave management, and biometric attendance modules, reducing client HR operational overhead by an estimated 70% post-deployment.
- Drove full product lifecycle — from system design and cloud infrastructure provisioning to client onboarding and post-sale support — as the sole technical co-founder.

Software Developer Intern

Saitec International | Noida, India | Sep 2025 – Present

- **Secure Architecture & Vulnerability Remediation:** Identified a critical architectural flaw exposing raw database credentials inside client-delivered binaries; decoupled all DB logic into a server-side RESTful API with token-based authentication, eliminating the attack surface and achieving zero credential-exposure incidents post-fix.
- **CI/CD & Infrastructure:** Engineered and managed end-to-end CI/CD pipelines on IIS Servers for multi-project deployments, sustaining 99.9% uptime across internal and client-facing production environments.
- **Automated Database Provisioning:** Built an automated database creation and configuration system that eliminated 100% of manual client-onboarding effort; implemented version-checking and minimum-version enforcement across the entire software suite.
- **HRMS & Biometric Integration:** Refactored a failing HRMS codebase into a production-grade system live for Tiranga Group; extended it with a standalone hardware integration module connecting directly to ZKTeco biometric devices via SDK to automate real-time attendance entries.
- **Automation & Bulk Processing:** Reduced HR manual data entry by 80% by engineering automated salary-crediting (PDF.js) and bulk employee-onboarding modules (ExcelJS) capable of processing hundreds of records per batch.
- **Legacy Stabilization & Licensing:** Stabilized legacy Windows Forms applications (POS, Production Management, Inventory Management) by resolving critical runtime bugs; engineered and deployed a universal licensing module securing all client-delivered applications.
- **Security Audit (Loan Management System):** Reverse-engineered a banking client's Loan Management System; identified and surgically removed critical security vulnerabilities and unauthorized data-tracking scripts, restoring system integrity.
- **Property Management System:** Stabilized a legacy Laravel-based Property Management System, increasing operational efficiency by 40% through automated rent workflows and RBAC implementation.

PROJECTS

Codecraft — Distributed Online Code Execution Platform

C++, Python, Java, Docker, Containerization | May 2025

- Engineered a scalable, distributed code execution platform supporting multiple languages (C++, Python, Java) with a microservices-oriented design for isolated execution routing.
- Implemented Docker-based containerization to sandbox runtime environments, preventing Remote Code Execution (RCE) vulnerabilities and achieving full workload isolation per submission.

Cloud-Synced Note Platform — Notion-Style Collaborative App

ASP.NET Core, Google Drive API, SQL Server | Oct 2025

- Architected a secure, Notion-style rich-text application with conflict-free cloud synchronization via Google Drive API integration, ensuring user data sovereignty and privacy.
- Optimized SQL Server indexing strategies for nested document structures, reducing query retrieval latency by 30% under production load.

MindEase — AI-Powered Mental Health Conversational Agent

React Native, Python, Flask, RESTful APIs | Jun 2025

- Developed a real-time mental health conversational agent using a Flask-based RESTful API backend and React Native frontend; optimized API response latency by 35%, increasing user session retention.
- Designed an accessibility-first UI following WCAG guidelines, broadening the platform's reach for users with diverse needs.

TECHNICAL SKILLS

Core Concepts: Data Structures & Algorithms, System Design, Distributed Systems, Microservices, OOP, DBMS, Operating Systems, Secure Architecture

Languages: C++, C#, Python, JavaScript (ES6+), TypeScript, PHP, SQL

Frontend: React.js, React Native, Tailwind CSS, HTML5, CSS3, Vite

Backend & APIs: Node.js, ASP.NET Core, Laravel, Django, Flask, Entity Framework, RESTful API Design

DevOps & Infra: Docker, Containerization, CI/CD Pipelines, IIS Server, Git, Postman, SSMS

Hardware & Integration: ZKTeco Biometric SDK, PDF.js, ExcelJS, Google Drive API

EDUCATION

Bachelor of Engineering in Computer Science | CGPA: 7.51 / 10

Chandigarh University, Punjab, India | Aug 2021 – Jul 2025

ACHIEVEMENTS & CERTIFICATIONS

- **LeetCode Knight (Rating: 2078 | Top 3% Globally):** Solved 500+ problems across Dynamic Programming, Graphs, and System Design. leetcode.com/u/neko_oni
- **HackerRank 5-Star Gold Badge:** Awarded in C and C++ Programming for consistent high-performance solutions.
- **Certifications:** Web Development, Python for Data Science, Discrete Mathematics.
